WhatsApp AI Assistant

What the system does today: one engine that runs a smart, branded WhatsApp assistant for every business you sign up.

24/7	~250	2 min	1 click
answers customers day and night	businesses on one engine	to add a new business	to move to a new n8n

For customers

Welcome menu
"Hi" brings up a branded menu: four options set per business, plus "Talk to a person".

AI answers, 24/7
Answers questions from the business's own info, prices and FAQs, in the customer's language, Pidgin included.

Understands photos
Looks at what the customer sends (a product, a receipt, a screenshot) and replies about it.

Understands voice notes
Turns voice notes into text and answers them like a typed message.

Products & prices
Lists what's available, with prices and a Pay link for each item (Stripe or Paystack).

Takes them to pay
When someone wants to buy, the assistant sends the right payment link.

Hands over to a person
Option 5, or "talk to someone", alerts the team and the bot goes quiet in that chat until the team is done.

Follows up
A lead who goes quiet gets one friendly check-in after 24 hours.

Remembers the chat
Keeps the conversation flowing naturally. Each business's chats stay separate.

For business owners & staff

Instant WhatsApp alerts
New contact · new lead · person requested · question the AI couldn't answer · sale or restock, with a low-stock warning.

Stock desk on WhatsApp
Staff type **list**, **low**, **stock rice**, **sell rice 2** or **restock rice 10**. Stock updates instantly.

Morning report, 08:00
One daily WhatsApp summary: new contacts, leads, people waiting for a reply, sales. Each comes with tap-to-reply links.

Everything logged
Every alert is saved, so nothing gets lost and reports stay accurate.

For you, running the platform

One engine, many businesses
Up to about 250 businesses. Each has its own WhatsApp number, menu, products, tone and AI instructions, all set from the database.

Add a business in 2 minutes
Fill in one form and scan a QR code with the business phone, and the bot is live.

Edit in one click
The Edit a Business form opens a business pre-filled: change prices, add or remove products, update details or pause the bot, then press Save.

Error alerts
If the bot ever breaks, you get a WhatsApp saying which step failed.

Spam & cost protection
More than 8 messages a minute from one number are ignored, which keeps AI costs in check.

One-click move
Run out of n8n credit? Import 5 files, press Set up, and every business's WhatsApp moves to the new n8n.

Coming next

Email alerts
Built. They switch on once Gmail is connected in n8n.

SMS alerts
Waiting on Twilio setup.

Live payments
Stripe links are in test mode. They go live once the Stripe account is activated.

Payment confirmation
The bot doesn't confirm payments yet. The team verifies receipts for now.

Full setup details, step-by-step guides and troubleshooting: **WhatsApp-Bot-Configuration-Map.pdf** (repo folder n8n/whatsapp/).
